

What you will learn

Original and innovative clinical practice aimed at connecting the basic mechanisms of disease to clinical symptoms

Biomarkers and treatments of neurometabolic and neurodegenerative diseases

The biochemical and cell biology bases of neurological symptoms

Director:
Pr Garcia-Cazorla
Head Neurometabolic Unit
Sant Joan de Déu (SJD), Barcelona

Coordinators:
Pr. Jean-Marie Saudubray
Emeritus Professor of Pediatrics and
Inborn Errors of Metabolism, Paris

Pr. Oscar Marin
Director of the Centre for
Developmental Neurobiology at King's
College, London

Dr. Juliana Ribeiro
Pediatric Neurologist at SJD, Barcelona

Pr. Fanny Mochel
Head Neurometabolic Unit, La Pitié
Salpêtrière, Paris

Master in NEUROMETABOLISM AND CELL BIOLOGY FOR CLINICIANS

**Holistic training in
neurometabolism and cell
biology for a new generation
of talented clinicians**

NOVEL PARADIGM

This international master aims to lay the ground for the much-needed novel paradigm in clinical neurology.

While classic approach is mainly based on clinical symptoms, here we aim to integrate different levels of complexity in agreement with the intricate operational network of the nervous system.

The neurological manifestations will be linked to genetic, molecular and biochemical markers, cellular pathways, and brain circuitries in a comprehensive manner as a necessary and new approach.

Most of all, we will provide educational tools to integrate the “pathophysiological thinking” in the clinical practice of both neurology and inborn errors of metabolism (in which >80% of diseases have neurological involvement).

This is indeed linked to the current development of new therapies

ONLINE MASTER with on-site summer schools

Duration: 2 years

Beginning: October 2022

Credit: 45 credit/year

Dedication regime: Part Time

Language: English

Target audience:

Health professionals dedicated to neurology (pediatric and adult) and/or inborn errors of metabolism

OUR PROGRAMME

The educational content of the first year is related to basic knowledge on brain metabolism and cellular neurobiology.

Part I: Cellular Neurochemistry and related diseases

Part II: Nervous system compartments 1: Intracellular communication and related diseases

Part III: Nervous system compartments 2: Intercellular communication and related diseases

The second year aims to connect neurochemistry and cell biology to the main neurological syndromes

Part IV: Neurodevelopment and Systems Neurobiology

Part V: Clinical syndromes and related biological mechanisms

Part VI: Biomarkers and New treatments

“
We empower our students to a new perspective on the knowledge of brain diseases”
”

SUMMER SCHOOLS

This master includes two summer schools in Barcelona

International renowned teachers

Professors of renowned international prestige will give the online lectures and will have the possibility through specific tutorial classes to interact and discuss with the students during live sessions.
